

# THE NEW SPEED OF AGILITY

## S23/S25 Consumables and Accessories

The S20 series is a platform of high-performance, robust, chemically resistant and agile autosamplers, designed specifically to improve sample throughput and save on analysis time. In addition, it is compatible with instrumentation across our spectroscopy platform, including ICP-MS, ICP-OES, AA (Syngistix™), UV/Vis (UVWinLab), and Fluorescence (SpectrumFL).

The two autosamplers in this platform are fully integrated with our software, ensuring seamless and reliable communication between the various hardware components. We also offer hassle-free consumable kits – from basic to more complex, curated kits – available for all your application needs.

### It is More than an Autosampler, It is an Automation Solution

Need a replacement consumable in your kit? No problem. We have the parts listed separately for your convenience while ordering.
